

## DIGITAL PARKING PERMIT VALIDATION

Parkva Patrol eliminates time-consuming hanging-tag permit validation, by instantly identifying unauthorized vehicles using mobile license plate recognition (LPR) to maximize enforcement efficiency.

A significant benefit of using Parkva Patrol in conjunction with your preferred digital permit system is the ability to have data pushed to the driver in real-time. This constant data stream provides access to the real-time permit status. As the driver nears the property, the allow-list, including guest permits issued while the driver is at the property, is updated automatically over-the-air (OTA). For private party impound (PPI) towing companies, integration with Omadi's dispatch towing platform and digital permitting feature allows for even greater productivity by operating within a familiar workflow.

## FEATURES AND BENEFITS

- Portable and installs in minutes
- Compact, IP 68 rated camera
- Exceptional performance in all lighting conditions
- Highly accurate output
- Single or dual-camera operation
- Seamless integration with Omadi
- **Economical- starting at \$4,500\***
