Parkva Watch (Beta)

PARKVA omadi

AUTOMATED 24/7 PARKING ENFORCEMENT

Enforcing parking rules doesn't need to be an uphill task. By combining advanced computer vision (CV) technology and artificial intelligence (AI), Parkva Watch allows you to enforce parking rules so that parking operates as intended.

Our first-generation solution (LotSentinel) required a fixed broadband internet connection and IP security cameras, which was not only expensive but invited a host of building-access issues and IT challenges. With Parkva Watch, we've gone wireless, relying on edge processing and 4G/5G LTE connectivity to deliver exceptional video analytics to detect parking violations that include:

- Customer-only parking (walk-offs)
- Exceeding time limit
- No parking zones

DIY Installation
The system is designed to be user-installed. The Parkva field-of-view (FoV) mobile app is a user-friendly tool that anyone can use to determine where to mount the cameras. The integrated system is preconfigured before it's shipped. Just place it on the rooftop, plug in the cameras, and connect the power source – it's that simple.

FEATURES AND BENEFITS

- Portable and installs in minutes
- Compact and outdoor-rated
- Exceptional performance in all lighting conditions
- Supports multiple power options: AC, PoE, and solar
- Remotely managed and monitored
- Supports over-the-air software updates
- Seamless integration with Omadi
